**INFORMED CONSENT DOCUMENT
FOR TREATMENT WITH CAVITATION**

In observance of Act 41/2002, regulating patient's autonomy and rights and duties concerning information and clinical documents (BOE 15-11-02), we offer you, in writing and in an understandable manner, information about **TREATMENT WITH CAVITATION**. However, said information has already been concisely and orally provided to you by the undersigned doctor, who also, and at your request, has addressed all your questions, as well as those related to the treatment. This document is just the graphic transcription of said information, to help you understand it and motivate a thoughtful and deliberate authorization.

It is important that you read this information carefully and in its entirety. Please sign or put your initials on every page, thus indicating that you have read and signed the consent document for the procedure recommended by your doctor.

In _____, on _____, _____
Patient Name _____
Date of Birth _____ ID _____
Address _____
Town _____
Phone Numbers _____

I HEREBY STATE:

That I REQUEST AND AUTHORIZE Doctor _____
_____, graduated in Medicine and Surgery, with
medical license number _____, to perform upon me a treatment known as
CAVITATION, that will be executed by the doctor and his/her auxiliary staff
_____. The alternatives to
said treatment are: _____.

I KNOW and ACCEPT the physician's professional training to perform this treatment.

The substances and machines involved have been authorized for use in aesthetic medicine,
and show the CE brand and its corresponding sanitary registration number.

I CONFIRM that the treatment mentioned above has been fully explained to me by the physician in words I can understand, including typical risks involved, undesired effects, the risks specific to me, and also discomfort or, occasionally, pain I may feel with normal post-treatment. I have also been told about other options available in the market, together with pros and cons of each one. Taking this into account, I have chosen the treatment described above.

I have also been informed, in terms of probability, about the results of the procedure according to references from comparative scientific literature, and the professional's previous experience executing these procedures.

BRIEF EXPLANATION OF THE TREATMENT:

Cavitation is a little-known physical phenomenon caused by high-power ultrasound, characterized by an increase in the pressure and temperature of bubbles or cavities containing gas and fluids due to resonance, with alteration of surface tension, which induces the formation of vapor bubbles inside a fluid. There are two ways to apply it:

Ultra Cavitation alone: It is applied with a lipolytic gel. Indicated for the treatment of cellulite, edemas, keloids, scars, and in tiny localized adiposities. Its effect is due to the cellular and molecular micromassages that it produces. It also improves adipose metabolism and microcirculation of these areas. Its effectiveness on fatty tissue is very limited, and its effect is temporary.

Ultrasonic Hydrolipoclasia: It involves infiltrating saline (serum or hypotonic serum) with or without lipolytic components at a depth of 0.6-1 cm below the skin, in the middle of fat tissue, to then apply high-power ultrasonic energy in pulsed mode; and, since ultrasonic waves travel more easily in a liquid medium, the impact of ultrasonic energy causes the fat cell to burst, producing a thinning of adipocytes. Several sessions are conducted. Its effectiveness is higher than with Ultra Cavitation alone, depending on the substances infiltrated in the saline, and its side effects are those derived from the infiltration: hematomas, allergic reactions or those typical of infiltrated products. Its effect lasts longer, but it is not permanent, so it is necessary to perform maintenance.

Treatment is performed without anesthesia or with topical or local anesthesia.

RISKS INHERENT TO THE PATIENT AND HIS/HER PERSONAL CIRCUMSTANCES:

I ACCEPT that there may be RISKS AND COMPLICATIONS described by medical science as inherent to this kind of treatment. These include:

- Risks and complications common to any medical-aesthetic treatment, like hematomas, edemas or inflammation that will usually resolve in a short period of time without the need to be treated.

- Short-term and temporary risks: Allergic reactions to the product or the applicator, occurrence of erythema (redness), mild painful sensation, infection, hematomas, and edemas that will have to be properly treated.
- Risks and complications specific to this treatment, that have been explained to me and that I have accepted. Especially: Insufficient result.
- Risks and complications that can be attributed to the anesthetic procedure (topical or local). Based on the process to treat, a variable amount of sessions will be required, usually around _____. The patient must avoid exposure to the sun or to ultraviolet radiation immediately after the procedure, and use sunscreen with a high protection factor that guarantees said determinant. If you are under a medical treatment, you must let us know in case there might be some kind of contraindication.

CONTRAINDICATIONS: Pregnancy, cardiac diseases, epilepsy, metal prosthetic in the area, allergies to the applicator, serious or decompensated diseases, active infection in the area, diabetes or decompensated hyperlipidemia.

I have been correctly informed, even in writing (information documents) and/or using images, about this treatment's characteristics: its fundamentals, the manner and details of its execution, its action mechanisms, its immediate effects, the process and evolution of the necessary supplementary treatments to observe in the following days, weeks or months, the cares and precautions to adopt in the following hours or days, the variability of the time necessary to fully recover; therefore, I acknowledge that no guarantee can be given to me as to the date when I can resume my regular activities (emotional, social, work and sports).

I ATTEST I have not left out or altered any data when showing my surgical medical history and records, especially those concerning allergies and diseases or personal risks.

The Medical History and results from tests performed on the patient don't advise against using the appropriate medical procedure when there isn't, a priori, any risks that may have determined the failure of the technique objectively considered, and which means to meet your expectations.

I RECOGNIZE that, during the treatment, unforeseen conditions may necessitate different procedures than those described above. Therefore, I hereby expressly authorize said procedures, including my transfer to a hospital center. In case of complications during the treatment, I authorize the Hospital to request the assistance they deem necessary from other specialists, in their best professional judgment.

I HAVE BEEN INFORMED that the number of sessions necessary to obtain the desired effect is only illustrative, being impossible to know the exact number of sessions that will be necessary in advance, because each patient's absorption/reaction is different. The efficacy of the result increases significantly with changes in lifestyle or supplementary treatments.

If, during treatment, the healthcare staff was accidentally exposed to my blood, according to the principles of good medical practice I have been informed of the need to perform the proper analytical determinations on my blood, related to potential pathologies of blood transmission, to adopt the most suitable preventive measures.

I AGREE to do my best to follow the doctor's instructions to the letter before, during and after the treatment mentioned above. I take responsibility for complying with post treatment measures recommended by the Hospital, as well as attending control visits suggested by the doctor.

I UNDERSTAND that the goal of the treatment is to improve my appearance, with the possibility that some imperfection remains and that the result may not be what I expected. In this sense, I have been informed that the aesthetic result of the treatment depends on factors like how easily you scar, and the formation or non-formation of keloids. I am aware that the medical field is not an exact science, and that absolute perfection cannot be guaranteed. I understand the result may not be as expected and acknowledge that I haven't been given any guarantee at all.

Medical action might not end in itself, and subsequent treatment action might be necessary to reach the goal you're consenting to.

The cost of the treatment includes several charges for the services provided. The total includes your doctor's fees and the cost of materials, equipment or product. The charges for this procedure don't include possible future costs for additional procedures of your choice, or that you require to review, optimize or complete your result. There may be additional charges due to complications arising from the treatment. Charges for secondary treatments concerning check-ups and charges that haven't been previously arranged will also be your responsibility. By signing the consent for this procedure, you acknowledge you have been informed about its risks and consequences and take responsibility for the medical decisions made, together with the economical costs of any future treatments.

I AUTHORIZE the taking of photographs and videos for an appropriate diagnostic evaluation, and for the control of the assessment and results. I also authorize the taking of photographs of the operated area for scientific, educational or clinical purposes, and I understand that their use is not a violation of privacy or confidentiality, rights to which I am entitled.

I KNOW my data will be treated in an automated manner, which I have authorized after my rights have been explained to me pursuant to the LOPD (Spanish Organic Act on Data Protection) in force: rights of access, rectification, cancellation and objection established by the Act, and after expressing I can address the Clinic in writing, notwithstanding the provisions of Section 8 of the Act about health-related data. With my signature, I give my express consent for my personal data to be handled by the CLINIC for their own purposes.

I am aware that my signature and this consent don't assume any kind of waiver to future claims, both clinical and legal. I am also aware that I can withdraw my signature from this consent at any time prior to the execution of the treatment.

I have clarified any doubts about everything that has been mentioned above, and I fully understand this CONSENT DOCUMENT, standing by each and all of its points; by signing the document, I ratify and consent to the execution of the treatment.
