**INFORMED CONSENT DOCUMENT
FOR LASER HAIR REMOVAL**

In observance of Act 41/2002, regulating patient's autonomy and rights and duties concerning information and clinical documents (BOE 15-11-02), we offer you, in writing and in an understandable manner, information about **LASER HAIR REMOVAL**. However, said information has already been concisely and orally provided to you by the undersigned doctor, who also, and at your request, has addressed all your questions, as well as those related to the treatment. This document is just the graphic transcription of said information, to help you understand it and motivate a thoughtful and deliberate authorization.

It is important that you read this information carefully and in its entirety. Please sign or put your initials on every page, thus indicating that you have read and signed the consent document for the procedure recommended by your doctor.

In _____, on _____,
 Patient Name _____
 Date of Birth _____ ID _____
 Address _____
 Town _____
 Phone Numbers _____

I HEREBY STATE:

That I REQUEST AND AUTHORIZE Doctor _____
 _____, graduated in Medicine and Surgery,
 with medical license number _____, to indicate that the laser hair removal
 described below _____, will be performed
 upon me with the equipment _____ by the institution's auxiliary
 staff, Mr./Ms. _____ having chosen this
 instead of the alternatives, namely _____.

I KNOW and ACCEPT the technician's professional ability to perform the suggested treatment.

The substances and machines involved have been authorized for use in aesthetic medicine, and show the CE brand and its corresponding sanitary registration number.

I CONFIRM that the treatment mentioned above has been fully explained to me by the physician in words I can understand, including typical risks involved, undesired effects, the risks specific to me, and also discomfort or, occasionally, pain I may feel with normal post-

treatment. I have also been told about other options available in the market, together with pros and cons of each one. Taking this into account, I have chosen the treatment described above.

I have also been informed, in terms of probability, about the results of the procedure according to references from comparative scientific literature, and the professional's previous experience executing these procedures.

BRIEF EXPLANATION OF THE TREATMENT:

Laser machines are appropriate for the treatment of hair removal. The wavelength of light, duration of exposure and level of energy are chosen to selectively damage hair follicles selected with minimal damage of the surrounding tissue. The energy of the laser is absorbed by the hair follicles and results in their heating. Follicles are damaged, thus allowing for hair removal. The wavelength of light, duration of exposure and level of energy are adjusted to maximize the heat applied to hair follicles and limit the damage of the surrounding tissue.

I have been informed that full hair removal of an area can be accomplished in 6-8 sessions, although based on the kind of skin, hair and area treated, more sessions may be necessary. Sessions will be conducted every 6-8 weeks.

I must use appropriate eye protection at all times during the laser treatment.

CONTRAINDICATIONS might include: herpes simplex, photosensitizing medical treatments, pregnancy or lactation, diabetes, and having a history of keloid scars or malignant processes, as well as recent sun exposure or if such exposure is being planned. I have also been informed that I must tell the hospital staff if I'm taking any drug substance, and about any change from baseline (pregnancy, illness, allergy...). This treatment is advised against very tanned skins, or that were just exposed to UVA radiation, since, in these cases, the risk of burns is higher.

The treatment is not usually bothersome and doesn't involve complications, but I understand there might be SIDE EFFECTS, which are very rare, like the occurrence of areas with transient hyper or hypopigmentation, burns that are usually temporary, purpura, scars and acneiform rash, as well as transient thermal effects, like redness, mild burns, temporary hematomas and transitory discoloration of the skin.

I HAVE BEEN INFORMED that, after the treatment, it is normal for the area to exhibit an usually mild erythema or edema, and even some intraepidermal blisters may occur; but, in general, these effects will resolve in a few hours, although in some cases they could last longer. However, in a treatment with high-intensity light, the risk of some first- or second-degree burns occurring in the area treated should never be ruled out. The risk is greater especially in dark skins, or skins recently exposed to the sun, presenting a high concentration of melanin. There can also be some change in pigmentation (hypopigmentation or hyperpigmentation) that is usually temporary and, if properly treated, will resolve in a short period of time.

I have been correctly informed, even in writing (information documents) and/or using images, about this treatment's characteristics: its fundamentals, the manner and details of its execution, its action mechanisms, its immediate effects, the process and evolution of the

necessary supplementary treatments to observe in the following days, weeks or months, the cares and precautions to adopt in the following hours or days, the variability of the time necessary to fully recover; therefore, I acknowledge that no guarantee can be given to me as to the date when I can resume my regular activities (emotional, social, work and sports).

I ATTEST I have not left out or altered any data when showing my surgical medical history and records, specially those concerning allergies and diseases or personal risks.

The Medical History and results from tests performed on the patient don't advise against using the appropriate medical procedure when there isn't, a priori, any risks that may have determined the failure of the technique objectively considered, and which means to meet your expectations.

I RECOGNIZE that, during the treatment, unforeseen conditions may necessitate different procedures than those described above. Therefore, I hereby expressly authorize said procedures, including my transfer to a hospital center. In case of complications during the treatment, I authorize the Hospital to request the assistance they deem necessary from other specialists, in their best professional judgment.

I HAVE BEEN INFORMED that the number of sessions necessary to obtain the desired effect is only illustrative, being impossible to know the exact number of sessions that will be necessary in advance, because each patient's absorption/reaction is different. Results are obtained with greater efficacy if the treatment performed is supplemented with other treatments that will improve its effects.

If, during treatment, the healthcare staff was accidentally exposed to my blood, according to the principles of good medical practice I have been informed of the need to perform the proper analytical determinations on my blood, related to potential pathologies of blood transmission, to adopt the most suitable preventive measures.

I AGREE to do my best to follow the doctor's instructions to the letter before, during and after the treatment mentioned above. I take responsibility for complying with post treatment measures recommended by the Hospital, as well as attending control visits suggested by the doctor.

I UNDERSTAND that the goal of the treatment is to improve my appearance, with the possibility that some imperfection remains and that the result may not be what I expected. In this sense, I have been informed that the aesthetic result of the treatment depends on factors like how easily you scar, and the formation or non-formation of keloids. I am aware that the medical field is not an exact science, and that absolute perfection cannot be guaranteed. I understand the result may not be as expected and acknowledge that I haven't been given any guarantee at all.

Medical action might not end in itself, and subsequent treatment action might be necessary to reach the goal you're consenting to.

The cost of the treatment includes several charges for the services provided. The total includes your doctor's fees and the cost of materials, equipment or product. The charges for this

procedure don't include possible future costs for additional procedures of your choice, or that you require to review, optimize or complete your result. There may be additional charges due to complications arising from the treatment. Charges for secondary treatments concerning check-ups and charges that haven't been previously arranged will also be your responsibility. By signing the consent for this procedure, you acknowledge you have been informed about its risks and consequences and take responsibility for the medical decisions made, together with the economical costs of any future treatments.

I AUTHORIZE the taking of photographs and videos for an appropriate diagnostic evaluation, and for the control of the assessment and results. I also authorize the taking of photographs of the operated area for scientific, educational or clinical purposes, and I understand that their use is not a violation of privacy or confidentiality, rights to which I am entitled.

I KNOW my data will be treated in an automated manner, which I have authorized after my rights have been explained to me pursuant to the LOPD (Spanish Organic Act on Data Protection) in force: rights of access, rectification, cancellation and objection established by the Act, and after expressing I can address the Clinic in writing, notwithstanding the provisions of Section 8 of the Act about health-related data. With my signature, I give my express consent for my personal data to be handled by the CLINIC for their own purposes.

I am aware that my signature and this consent don't assume any kind of waiver to future claims, both clinical and legal. I am also aware that I can withdraw my signature from this consent at any time prior to the execution of the treatment.

I have clarified any doubts about everything that has been mentioned above, and I fully understand this CONSENT DOCUMENT, standing by each and all of its points; by signing the document, I ratify and consent to the execution of the treatment.
