**INFORMED CONSENT DOCUMENT
FOR TREATMENT WITH FINASTERIDE**

In observance of Act 41/2002, regulating patient's autonomy and rights and duties concerning information and clinical documents (BOE 15-11-02), we offer you, in writing and in an understandable manner, information about **TREATMENT WITH FINASTERIDE**. However, said information has already been concisely and orally provided to you by the undersigned doctor, who also, and at your request, has addressed all your questions, as well as those related to the treatment. This document is just the graphic transcription of said information, to help you understand it and motivate a thoughtful and deliberate authorization.

It is important that you read this information carefully and in its entirety. Please sign or put your initials on every page, thus indicating that you have read and signed the consent document for the procedure recommended by your doctor.

In _____, on _____, _____

I HEREBY STATE:

That I REQUEST AND AUTHORIZE Doctor _____
_____, graduated in Medicine and Surgery,
with medical license number _____, to inform me about the **TREATMENT WITH
FINASTERIDE** for my androgenetic alopecia, having chosen this instead of the alternatives,
namely _____.

I KNOW and ACCEPT the physician's professional training to perform this treatment.

The substances and machines involved have been authorized for use in aesthetic medicine,
and show the CE brand and its corresponding sanitary registration number.

I CONFIRM that the treatment mentioned above has been fully explained to me by the
physician in words I can understand, including typical risks involved, undesired effects, the
risks specific to me, and also discomfort or, occasionally, pain I may feel with normal post-
treatment. I have also been told about other options available in the market, together with
pros and cons of each one. Taking this into account, I have chosen the treatment described
above.

I have also been informed, in terms of probability, about the results of the procedure according to references from comparative scientific literature, and the professional's previous experience executing these procedures.

BRIEF EXPLANATION OF THE TREATMENT:

It is a cosmetic treatment intended to stabilize and improve the degree of androgenetic alopecia.

It involves the oral administration of finasteride, a drug that inhibits the 5-alpha reductase enzyme, which produces very powerful hormones that, among other things, reduce and atrophy the hair follicle.

Finasteride is a drug that has been approved for male alopecia (one dose of 1 mg/d) and for the treatment of benign prostatic hypertrophy (one dose of 5 mg/d). The use of finasteride **IS NOT APPROVED TO TREAT WOMEN**. I have been informed about the publication in journals of the use of finasteride by women, where it is presented as a safe drug, especially after menopause.

However, I know the medication may cause adverse effects, usually well tolerated and reversible, like headache, dizziness, menstrual disorders and body hair growth. There are no observational studies about potential long-term side effects.

I have been informed that this medication may cause severe alterations in human fetuses; therefore, its administration is contraindicated during pregnancy and lactation. In case of being a woman of childbearing potential, I agree to use a totally effective method of contraception one month before beginning treatment, during the whole period of the treatment, and one month after completing treatment.

I have been correctly informed, even in writing (information documents) and/or using images, about this treatment's characteristics: its fundamentals, the manner and details of its execution, its action mechanisms, its immediate effects, the process and evolution of the necessary supplementary treatments to observe in the following days, weeks or months, the cares and precautions to adopt.

I ATTEST I have not left out or altered any data when showing my surgical medical history and records, especially those concerning allergies and diseases or personal risks.

The Medical History and results from tests performed on the patient don't advise against using the appropriate medical procedure when there isn't, a priori, any risks that may have determined the failure of the technique objectively considered, and which means to meet your expectations.

I RECOGNIZE that, during the treatment, unforeseen conditions may necessitate different procedures than those described above. Therefore, I hereby expressly authorize said procedures, including my transfer to a hospital center. In case of complications during the treatment, I authorize the Hospital to request the assistance they deem necessary from other specialists, in their best professional judgment.

I HAVE BEEN INFORMED that the time necessary to obtain the desired effect is only illustrative, being impossible to know the time that will be necessary in advance, because each patient's absorption/reaction is different. Results are obtained with greater efficacy if the treatment performed is supplemented with other treatments that will improve its effects.

If, during treatment, the healthcare staff was accidentally exposed to my blood, according to the principles of good medical practice I have been informed of the need to perform the proper analytical determinations on my blood, related to potential pathologies of blood transmission, to adopt the most suitable preventive measures.

I AGREE to do my best to follow the doctor's instructions to the letter before, during and after the treatment mentioned above. I take responsibility for complying with post treatment measures recommended by the Hospital, as well as attending control visits suggested by the doctor.

I UNDERSTAND that the goal of the treatment is to improve my appearance, with the possibility that some imperfection remains and that the result may not be what I expected. In this sense, I have been informed that the aesthetic result of the treatment depends on factors like how easily you scar, and the formation or non-formation of keloids. I am aware that the medical field is not an exact science, and that absolute perfection cannot be guaranteed. I understand the result may not be as expected and acknowledge that I haven't been given any guarantee at all.

Medical action might not end in itself, and subsequent treatment action might be necessary to reach the goal you're consenting to.

The cost of the treatment includes several charges for the services provided. The total includes your doctor's fees and the cost of materials, equipment or product. The charges for this procedure don't include possible future costs for additional procedures of your choice, or that you require to review, optimize or complete your result. There may be additional charges due to complications arising from the treatment. Charges for secondary treatments concerning check-ups and charges that haven't been previously arranged will also be your responsibility. By signing the consent for this procedure, you acknowledge you have been informed about its risks and consequences and take responsibility for the medical decisions made, together with the economical costs of any future treatments.

I AUTHORIZE the taking of photographs and videos for an appropriate diagnostic evaluation, and for the control of the assessment and results. I also authorize the taking of photographs of the operated area for scientific, educational or clinical purposes, and I understand that their use is not a violation of privacy or confidentiality, rights to which I am entitled.

I KNOW my data will be treated in an automated manner, which I have authorized after my rights have been explained to me pursuant to the LOPD (Spanish Organic Act on Data Protection) in force: rights of access, rectification, cancellation and objection established by the Act, and after expressing I can address the Clinic in writing, notwithstanding the provisions of Section 8 of the Act about health-related data. With my signature, I give my express consent for my personal data to be handled by the CLINIC for their own purposes.

I am aware that my signature and this consent don't assume any kind of waiver to future claims, both clinical and legal. I am also aware that I can withdraw my signature from this consent at any time prior to the execution of the treatment.

I have clarified any doubts about everything that has been mentioned above, and I fully understand this CONSENT DOCUMENT, standing by each and all of its points; by signing the document, I ratify and consent to the execution of the treatment.

Date and place
