INFORMED CONSENT FOR INFILTRATION OF HYALURONIDASE

In observance of Act 41/2002, regulating patient's autonomy and rights and duties concerning information and clinical documents (BOE 15-11-02), we offer you, in writing and in an understandable manner, information about **INFILTRATION OF HYALURONIDASE**. However, said information has already been concisely and orally provided to you by the undersigned doctor, who also, and at your request, has addressed all your questions, as well as those related to the treatment. This document is just the graphic transcription of said information to help you understand it and motivate a thoughtful and deliberate authorization.

It is important that you read this information carefully and in its entirety. Please sign or put your initials on every page, thus indicating that you have read them, and sign the consent document for the procedure recommended by your doctor.

In _____, on _____,
Patient Name _____
Date of Birth _____ ID _____
Address _____
Town _____
Phone Numbers _____

I HEREBY STATE:

That I REQUEST AND AUTHORIZE Doctor _____,
graduated in Medicine and Surgery with medical license number _____, to
perform upon me a treatment known as **INFILTRATION OF HYALURONIDASE**, having chosen
this instead of the alternatives, namely _____.

I have been informed about, and I accept, the commonly known risks of premedication,
anesthesia and/or the treatment to be performed.

I CONSENT, if needed, to the administration of local or topic anesthesia by, or under the
direction of, Dr. _____.

I KNOW and ACCEPT the physician's professional training to perform this treatment.

The substances and machines involved have been authorized for use in aesthetic medicine,
and show the CE brand and its corresponding sanitary registration number.

I CONFIRM that the treatment mentioned above has been fully explained to me by the
physician in words I can understand, including typical risks involved, undesired effects, the

risks specific to me, and also discomfort or, occasionally, pain I may feel with normal post-treatment. I have also been told about other options available in the market, together with pros and cons of each one. Taking this into account, I have chosen the treatment described above.

I have also been informed, in terms of probability, about the results of the procedure according to references from comparative scientific literature, and the professional's previous experience executing these procedures.

BRIEF EXPLANATION OF THE TREATMENT:

The purpose of the technique is to inject an enzyme called hyaluronidase in order to remove or correct a skin filling of hyaluronic acid.

Hyaluronic acid has an antidote known as hyaluronidase that may be used for several adverse effects.

The treatment can be repeated, or small doses can be injected for retouching as necessary, at intervals that will be determined by the doctor. I have been informed that hyaluronidase is antigenic: the repeated administration of high doses of this enzyme results in the formation of neutralizing antibodies.

To get the best result possible, the infiltration of hyaluronidase is followed by a soft massage and can even be accompanied by manual lymphatic drainage in the treated area.

The area to be treated is _____.

I understand that, despite having chosen the right treatment and being correctly performed, there may be undesired effects, such as swelling, redness, pain, and burning at the inoculation site; hematomas may occur too, which will spontaneously disappear a few days later. If any of these complications occur, be assured that they are temporary and reversible, and they are not life-threatening. In some cases, allergic reactions after one or more injections have been reported. I know that these are more common in individuals allergic to bee stings.

In my particular case, I have been warned about _____.

CONTRAINDICATIONS: Known allergy to hyaluronidase, serious or decompensated diseases, certain autoimmune diseases (the doctor will rule out which ones: scleroderma, etc.) or patients undergoing immunotherapy, intake of immunosuppressive medications, active infection in the area, decompensated diabetes, history of abnormal scarring, previous permanent implants in the area, pregnancy, lactation, and patients under 18 years old.

I have been correctly informed, even in writing (information documents), about this treatment's characteristics: its fundamentals, the manner and details of its execution, its action mechanisms, its immediate effects, the process and evolution of the necessary supplementary treatments to observe in the following days, weeks or months, the cares and

precautions to adopt in the following hours or days, the variability of the time necessary to fully recover; therefore, I acknowledge that no guarantee can be given to me as to the date when I can resume my regular activities (emotional, social, work and sports).

I ATTEST I have not left out or altered any data when showing my surgical medical history and records, specially those concerning allergies and diseases or personal risks.

The Medical History and results from tests performed on the patient don't advise against using the appropriate medical procedure when there isn't, a priori, any risks that may have determined the failure of the technique objectively considered, and which means to meet your expectations.

I RECOGNIZE that, during the treatment, unforeseen conditions or conditions like those mentioned before may necessitate different procedures than those described above. Therefore, I hereby expressly authorize said procedures, including an emergency injection of hyaluronidase without a previous allergy test and my transfer to a hospital center. In case of complications during the treatment, I authorize the Hospital to request the assistance they deem necessary from other specialists, in their best professional judgment.

Results can be improved if the treatment performed is supplemented with other treatments that enhance its effects (such as botulinum toxin, peels and others).

If, during treatment, the healthcare staff was accidentally exposed to my blood, according to the principles of good medical practice, I have been informed of the need to perform the proper analytical determinations on my blood, related to potential pathologies of blood transmission, to adopt the most suitable preventive measures.

I have been explained that it is not known for sure if contact with the SARS-CoV-2 virus or vaccination to prevent this infection may have affect the treatment whether in the short or the long term.

I AGREE to do my best to follow the doctor's instructions to the letter before, during and after the treatment mentioned above. I take responsibility for complying with post treatment measures recommended by the Hospital, as well as attending control visits suggested by the doctor.

I UNDERSTAND that the goal of the treatment is to improve my appearance, with the possibility that some imperfection remains and that the result may not be what I expected. In this sense, I have been informed that the aesthetic result of the treatment depends on factors like how easily you scar, and the formation or non-formation of keloids. I am aware that the medical field is not an exact science, and that absolute perfection cannot be guaranteed. I understand the result may not be as expected and acknowledge that I haven't been given any guarantee at all.

Medical action might not end in itself, and subsequent treatment action might be necessary to reach the goal you're consenting to.

The cost of the treatment includes several charges for the services provided. The total includes your doctor's fees and the cost of materials, equipment or product. The charges for this procedure don't include possible future costs for additional procedures of your choice, or that you require to review, optimize or complete your result. There may be additional charges due to complications arising from the treatment. Charges for secondary treatments concerning check-ups and charges that haven't been previously arranged will also be your responsibility. By signing the consent for this procedure, you acknowledge you have been informed about its risks and consequences and take responsibility for the medical decisions made, together with the economical costs of any future treatments.

I AUTHORIZE the taking of photographs and videos for an appropriate diagnostic evaluation, and for the control of the assessment and results. I also authorize the taking of photographs of the operated area for scientific, educational or clinical purposes, and I understand that their use is not a violation of privacy or confidentiality, rights to which I am entitled.

I KNOW my data will be treated in an automated manner, which I have authorized after my rights have been explained to me pursuant to the LOPD (Spanish Organic Act on Data Protection) in force: rights of access, rectification, cancellation and objection established by the Act, and after expressing I can address the Clinic in writing, notwithstanding the provisions of Section 8 of the Act about health-related data. With my signature, I give my express consent for my personal data to be handled by the CLINIC for their own purposes.

I am aware that my signature and this consent don't assume any kind of waiver to future claims, both clinical and legal. I am also aware that I can withdraw my signature from this consent at any time prior to the execution of the treatment.

I have clarified any doubts about everything that has been mentioned above, and I fully understand this CONSENT DOCUMENT, standing by each and all of its points; by signing the document, I ratify and consent to the execution of the treatment.

Date and place
