INFORMED CONSENT DOCUMENT FOR TREATMENT WITH ORAL ISOTRETINOIN

In observance of Act 41/2002, regulating patient's autonomy and rights and duties concerning information and clinical documents (BOE 15-11-02), we offer you, in writing and in an understandable manner, information about **TREATMENT WITH ORAL ISOTRETINOIN**. However, said information has already been concisely and orally provided to you by the undersigned doctor, who also, and at your request, has addressed all your questions, as well as those related to the treatment. This document is just the graphic transcription of said information, to help you understand it and motivate a thoughtful and deliberate authorization.

It is important that you read this information carefully and in its entirety. Please sign or put your initials on every page, thus indicating that you have read and signed the consent document for the procedure recommended by your doctor.

Medical History No.: _____

Mr./Ms. _____ of _____ years of age,
(Patient's name and two surnames)
domiciled at _____ and ID _____
(Patient address)

Mr./Ms. _____ of _____ years of age,
(Legal representative's name and two surnames)
domiciled at _____ and ID _____
(Legal Representative address)

In his/her capacity as _____ of _____
(Legal Representative, relative or close family) (Patient's name and two surnames)

I DECLARE:

That DOCTOR _____
(Name and two surnames of physician providing the information)

has explained to me that, in my case, I should proceed to receive TREATMENT WITH ORAL ISOTRETINOIN.

This treatment is considered the best and most appropriate for me, although there may exist other alternatives indicated in other cases, which I had the chance to discuss with the doctor. I have also been informed about the possible consequences of not undergoing the recommended treatment.

I KNOW and ACCEPT the physician's professional training to perform this treatment.

The substances and machines involved have been authorized for use in aesthetic medicine, and show the CE brand and its corresponding sanitary registration number.

I CONFIRM that the treatment mentioned above has been fully explained to me by the physician in words I can understand, including typical risks involved, undesired effects, the risks specific to me, and also discomfort or, occasionally, pain I may feel with normal post-treatment. I have also been told about other

options available in the market, together with pros and cons of each one. Taking this into account, I have chosen the treatment described above.

I have also been informed, in terms of probability, about the results of the procedure according to references from comparative scientific literature, and the professional's previous experience executing these procedures.

BRIEF EXPLANATION OF THE TREATMENT:

1. The goal of the treatment is to control the symptoms of nodulocystic acne, acne conglobata or acne with risk of permanent scarring that has not responded well to conventional treatments.

2. I understand that, in a small number of cases, symptoms may reappear once the treatment has been discontinued, and, if necessary, it can be administered again after a period of 8 weeks.

3. I am aware that, during treatment, a series of side effects may occur, usually well-known and controllable following the instructions of the physician, such as mucosal dryness (lips, eyes and nostrils), skin dryness and fragility, exfoliation of palms and arches of feet, muscle and joint pains, and temporary and reversible hair loss. In case of wearing contact lenses, you may experience tolerability issues to them. I will avoid hair removal by waxing to prevent skin lesions due to treatment-related skin fragility.

4. I have been explained that, in long treatments, benign alterations of the bones may occur, such as skeletal hyperostosis and extraosseous calcification. Also, analyses may show deranged liver function, increased blood fats and a change in glucose tolerance in diabetics, so it is recommended to perform analysis at the beginning of treatment, at the end of the first month and, subsequently, at quarterly intervals.

5. The doctor has informed me that this medication causes **SERIOUS FETAL MALFORMATIONS** if taken, even in small amounts, during pregnancy, so it is **CONTRAINDICATED DURING PREGNANCY** and in women of childbearing potential not using a totally safe method of contraception one month before starting treatment, during the treatment, and one month after discontinuing it. Therefore, I am fully aware that I must use at least 1 and preferably 2 **SAFE METHODS OF CONTRACEPTION** during at least **ONE MONTH BEFORE** treatment, **DURING** the treatment and **ONE MONTH AFTER** its completion. I am aware that I **MUST STOP TAKING ISOTRETINOIN** and seek medical advice immediately if:

- My period is late.

- I get pregnant during the treatment.

- I get pregnant within a month after ending the treatment.

6. I have been told that this medication is contraindicated during lactation, during concurrent therapy with tetracycline, and in patients with intracranial hypertension, renal failure, liver disease, hyperlipemia, hypervitaminosis A and hypersensitivity to the product, so I must inform the doctor if I think I have any of these conditions or diseases.

7. The doctor has also warn me that this medication cannot be administered simultaneously with other drugs, such as tetracycline, vitamin A supplements, antacids, cholestiramine, laxatives, lithium, phenobarbital, antiepileptic medication (carbamazepine), haloperidol. I must not take said substances simultaneously without the doctor's knowledge and consent; it is recommended that I ask my doctor before taking any medication. I must not drink alcohol either.

8. Other risks and complications that may occur based on my personal circumstances (prior health status, age, occupation, beliefs, etc.) are: _____.

I have been correctly informed, even in writing (information documents) and/or using images, about this treatment's characteristics: its fundamentals, the manner and details of its execution, its action mechanisms, its immediate effects, the process and evolution of the necessary supplementary treatments to observe in the following days, weeks or months, the cares and precautions to adopt in the following hours or days, the variability of the time necessary to fully recover; therefore, I acknowledge that no guarantee can be given to me as to the date when I can resume my regular activities (emotional, social, work and sports).

I ATTEST I have not left out or altered any data when showing my surgical medical history and records, especially those concerning allergies and diseases or personal risks.

The Medical History and results from tests performed on the patient don't advise against using the appropriate medical procedure when there isn't, a priori, any risks that may have determined the failure of the technique objectively considered, and which means to meet your expectations.

I RECOGNIZE that, during the treatment, unforeseen conditions may necessitate different procedures than those described above. Therefore, I hereby expressly authorize said procedures, including my transfer to a hospital center. In case of complications during the treatment, I authorize the Hospital to request the assistance they deem necessary from other specialists, in their best professional judgment.

I HAVE BEEN INFORMED that the total amount of oral isotretinoin necessary to obtain the desired effect is only illustrative, being impossible to know the exact amount of the product that will be necessary in advance because it depends on my weight and possible tolerance, and each patient's absorption/reaction is different. Results are obtained with greater efficacy if the treatment performed is supplemented with other treatments that will improve its effects.

I AGREE to do my best to follow the doctor's instructions to the letter before, during and after the treatment mentioned above. I take responsibility for complying with post treatment measures recommended by the Hospital, as well as attending control visits suggested by the doctor.

I UNDERSTAND that the goal of the treatment is to improve my appearance, with the possibility that some imperfection remains and that the result may not be what I expected. In this sense, I have been informed that the aesthetic result of the treatment depends on factors like how easily you scar, and the formation or non-formation of keloids. I am aware that the medical field is not an exact science, and that absolute perfection cannot be guaranteed. I understand the result may not be as expected and acknowledge that I haven't been given any guarantee at all.

Medical action might not end in itself, and subsequent treatment action might be necessary to reach the goal you're consenting to.

The cost of the treatment includes several charges for the services provided. The total includes your doctor's fees and the cost of materials, equipment or product. The charges for this procedure don't include possible future costs for additional procedures of your choice, or that you require to review, optimize or complete your result. There may be additional charges due to complications arising from the treatment. Charges for secondary treatments concerning check-ups and charges that haven't been previously arranged will also be your responsibility. By signing the consent for this procedure, you acknowledge you have been

informed about its risks and consequences and take responsibility for the medical decisions made, together with the economic costs of any future treatments.

I AUTHORIZE the taking of photographs and videos for an appropriate diagnostic evaluation, and for the control of the assessment and results. I also authorize the taking of photographs of the operated area for scientific, educational or clinical purposes, and I understand that their use is not a violation of privacy or confidentiality, rights to which I am entitled.

I KNOW my data will be treated in an automated manner, which I have authorized after my rights have been explained to me pursuant to the LOPD (Spanish Organic Act on Data Protection) in force: rights of access, rectification, cancellation and objection established by the Act, and after expressing I can address the Clinic in writing, notwithstanding the provisions of Section 8 of the Act about health-related data. With my signature, I give my express consent for my personal data to be handled by the CLINIC for their own purposes.

I am aware that my signature and this consent don't assume any kind of waiver to future claims, both clinical and legal. I am also aware that I can withdraw my signature from this consent at any time prior to the execution of the treatment.

I have clarified any doubts about everything that has been mentioned above, and I fully understand this CONSENT DOCUMENT, standing by each and all of its points; by signing the document, I ratify and consent to the execution of the treatment.
