**INFORMED CONSENT DOCUMENT  
FOR TREATMENT WITH BOTULINUM TOXIN**

In observance of Act 41/2002, regulating patient's autonomy and rights and duties concerning information and clinical documents (BOE 15-11-02), we offer you, in writing and in an understandable manner, information about **TREATMENT WITH BOTULINUM TOXIN**. However, said information has already been concisely and orally provided to you by the undersigned doctor, who also, and at your request, has addressed all your questions, as well as those related to the treatment. This document is just the graphic transcription of said information, to help you understand it and motivate a thoughtful and deliberate authorization.

It is important that you read this information carefully and in its entirety. Please sign or put your initials on every page, thus indicating that you have read and signed the consent document for the procedure recommended by your doctor.

In \_\_\_\_\_, on \_\_\_\_\_,  
Patient Name \_\_\_\_\_  
Date of Birth \_\_\_\_\_ ID \_\_\_\_\_  
Address \_\_\_\_\_  
Town \_\_\_\_\_  
Phone Numbers \_\_\_\_\_

**I HEREBY STATE:**

That I REQUEST AND AUTHORIZE Doctor \_\_\_\_\_,  
\_\_\_\_\_, graduated in Medicine and Surgery, with  
medical license number \_\_\_\_\_, to perform upon me a treatment known as  
**BOTULINUM TOXIN FOR WRINKLE REMOVAL**,  
brand \_\_\_\_\_ batch \_\_\_\_\_,  
having chosen this instead of \_\_\_\_\_.

I KNOW and ACCEPT the physician's professional training to perform this treatment.

The substances and machines involved have been authorized for use in aesthetic medicine, and show the CE brand and its corresponding sanitary registration number.

I CONFIRM that the treatment mentioned above has been fully explained to me by the physician in words I can understand, including typical risks involved, undesired effects, the risks specific to me, and also discomfort or, occasionally, pain I may feel with normal post-treatment. I have also been told about other options available in the market, together with

pros and cons of each one. Taking this into account, I have chosen the treatment described above.

I have also been informed, in terms of probability, about the results of the procedure according to references from comparative scientific literature, and the professional's previous experience executing these procedures.

#### **BRIEF EXPLANATION OF THE TREATMENT:**

The injection of botulinum toxin type A causes paralysis or selectively and temporary reduces the contraction of the muscles injected for a minimum of 12 weeks, by blocking the peripheral cholinergic nerve endings. In aesthetic medicine, it is applied to relax wrinkles located in space between the eyebrows and periorbital wrinkles (crow's feet). Wrinkles improvement is not usually immediate, but it occurs gradually during the week after treatment, so normally, a check-up is performed 2 weeks after the initial treatment to correct any irregularities left, after which it is not recommended to inject the area again until a minimum of 12 weeks after the procedure, since repeated and too frequent injections might induce the formation of antitoxin antibodies, developing resistance to therapy, which would reduce the efficiency of subsequent treatments with botulinum toxin type A, even for other non-aesthetic indications (ophthalmologic, neurological, etc.). The maximum effect is usually achieved within 5-6 weeks after the injection.

Like any medication, the physician must decide on the dose, which will be personalized in all cases, without exceeding the maximum dose indicated. Every brand of the toxin authorized in Spain is presented as a lyophilized substance; thus the doctor must reconstitute the solution with sterile saline and measure it out following the manufacturer's indications.

**CONTRAINDICATIONS:** Allergy to botulinum toxin type A or to any of the excipients of the medication. Myasthenia gravis or Lambert-Eaton Syndrome (diseases affecting muscles). History of dysphagia or swallowing and, in general, of movement alterations in muscles (ALS, MS), for which the risk-benefit ratio must be previously assessed by the doctor responsible. Infection or inflammation in the area. The concomitant use of aminoglycoside antibiotics, spectinomycin or medications that may interfere with the neuromuscular transmission is not recommended. Individuals under 18 years old, pregnant women, females of childbearing potential that are not on oral contraceptives, or lactating women.

I ACCEPT that there may be RISKS AND COMPLICATIONS described by medical science as inherent to this treatment, which is usually 25%. Some of the main SIDE EFFECTS that have been explained to me include:

- Very common (over 10%): Pain, hematomas, erythema, edemas or inflammation (even of the eyelids) in the injected area that will usually resolve in a short period of time without the need to be treated.
- Common (between 1-10%):
  - Headache.
  - Nausea.

- Changes in skin sensitivity (numbness, tightness). They would be temporary and resolve spontaneously after a few days.
- Localized muscle weakness.
- Palpebral ptosis. Eyebrows drooping: it's temporary, but may require a specific treatment.
- Asymmetry. If asymmetry in the treated area is not achieved after just one treatment with botulinum toxin, additional treatments may be necessary.
- Insufficient result: Several serial and time-separated treatments with botulinum toxin may be necessary to obtain the desired aesthetic result.
- Uncommon (between 1% y 1%):
  - Infections. Infections after this kind of treatment are very rare. If an infection occurs, you may need additional treatment, including antibiotics.
  - Allergic reactions. Transient generalized or local erythema and itching have been described, which may last a few days. Allergic reactions may require additional treatment.
  - Adverse reactions possibly related to the spread of the toxin away from the injection site like, for example, muscle weakness, difficulty swallowing, constipation or pneumonia caused by the presence of unwanted food or liquids in the airways, which can be fatal. That is why it is not recommended to apply the toxin in patients with history of dysphagia and swallowing, or in areas located near the muscle involved in these functions.
  - Temporary vision alterations (which could impair driving skills) resolving within a few hours or days.
  - Other temporary reactions: discomfort, dizziness, vertigo, strabismus, hearing impairment, abdominal pain, fainting, etc.

I have been correctly informed, even in writing (information documents) and/or using images, about this treatment's characteristics: its fundamentals, the manner and details of its execution, its action mechanisms, its immediate effects, the process and evolution of the necessary supplementary treatments, if necessary, to observe in the following days, weeks or months, the cares and precautions to adopt in the following hours or days, the variability of the time necessary to fully recover; therefore, I acknowledge that no guarantee can be given to me as to the date when I can resume my regular activities (emotional, social, work and sports).

I ATTEST I have not left out or altered any data when showing my surgical medical history and records, especially those concerning allergies and diseases or personal risks.

The Medical History and results from tests performed on the patient don't advise against using the appropriate medical procedure when there isn't, a priori, any risks that may have determined the failure of the technique objectively considered, and which means to meet your expectations.

I RECOGNIZE that, during the treatment, unforeseen conditions may necessitate different procedures than those described above. Therefore, I hereby expressly authorize said procedures, including my transfer to a hospital center. In case of complications during the treatment, I authorize the Hospital to request the assistance they deem necessary from other specialists, in their best professional judgment.

I HAVE BEEN INFORMED that the amount of medication necessary to obtain the desired effect is only illustrative, being impossible to know the exact amount of medication in advance, because each patient's absorption/reaction is different. Results are obtained with greater efficacy if the treatment performed is supplemented with the post treatment measures I've been given (and/or other treatments that will improve its effects—filler substance in very deep wrinkles, peeling, etc.).

If, during treatment, the healthcare staff was accidentally exposed to my blood, according to the principles of good medical practice I have been informed of the need to perform the proper analytical determinations on my blood, related to potential pathologies of blood transmission, to adopt the most suitable preventive measures.

I AGREE to do my best to follow the doctor's instructions to the letter before, during and after the treatment mentioned above. I take responsibility for complying with post treatment measures recommended by the Hospital (sleep on my back, refrain from exercising, etc.), as well as attending control visits suggested by the doctor.

I UNDERSTAND that the goal of the treatment is to improve my appearance, with the possibility that some imperfection remains and that the result may not be what I expected. In this sense, I have been informed that the aesthetic result of the treatment depends on factors like muscle strength in that area, how old are my wrinkles, etc. I am aware that the medical field is not an exact science, and that absolute perfection cannot be guaranteed. I understand the result may not be as expected and acknowledge that I haven't been given any guarantee at all.

Medical action might not end in itself, and subsequent treatment action might be necessary to reach the goal you're consenting to.

The cost of the treatment includes several charges for the services provided. The total includes your doctor's fees and the cost of materials, equipment or product. The charges for this procedure don't include possible future costs for additional procedures of your choice, or that you require to review, optimize or complete your result. There may be additional charges due to complications arising from the treatment. Charges for secondary treatments concerning check-ups and charges that haven't been previously arranged will also be your responsibility. By signing the consent for this procedure, you acknowledge you have been informed about its risks and consequences and take responsibility for the medical decisions made, together with the economical costs of any future treatments.

I AUTHORIZE the taking of photographs and videos for an appropriate diagnostic evaluation, and for the control of the assessment and results. I also authorize the taking of photographs of the treated area for scientific, educational or clinical purposes, and I understand that their use is not a violation of privacy or confidentiality, rights to which I am entitled.

I KNOW my data will be treated in an automated manner, which I have authorized after my rights have been explained to me pursuant to the LOPD (Spanish Organic Act on Data Protection) in force: rights of access, rectification, cancellation and objection established by the Act, and after expressing I can address the Clinic in writing, notwithstanding the provisions

of Section 8 of the Act about health-related data. With my signature, I give my express consent for my personal data to be handled by the CLINIC for their own purposes.

I am aware that my signature and this consent don't assume any kind of waiver to future claims, both clinical and legal. I am also aware that I can withdraw my signature from this consent at any time prior to the execution of the treatment.

I have clarified any doubts about everything that has been mentioned above, and I fully understand this CONSENT DOCUMENT, standing by each and all of its points; by signing the document, I ratify and consent to the execution of the treatment.
